

# Integrating hygiene

Speedmaster by cool it – the superior high-speed door

## Speedmaster: quick, clean and hygienic.

This high-speed sliding door by cool it is a convincing solution. It not only offers rapid opening and closing plus good thermal insulation properties, but also meets the highest standards of hygiene.

### Innovative technology for safe hygiene

From a hygiene point of view, vertically opening high-speed doors often cause problems, especially in the meat and food industries: drips of water can cause contamination. Speedmaster, the double-leaf sliding door by cool it, is the safe answer here: because the doors open sideways, nothing can drip. Further, the Speedmaster sliding door has smooth surfaces that are ideal for hygienically safe cleaning.

### No space for dirt and bacteria

Unlike conventional high-speed doors, the Speedmaster by cool it is built especially for the demands of the food industry. Its construction completely avoids the use of open sections as guide rails. The combination of compact construction and the use of high-quality durable materials ensures tip-top cleanliness – especially in areas with extensive daily cleaning. Speedmaster makes it easy for facilities to satisfy the highest hygiene standards.

### Rapid and flexible – TÜV tested

When it comes to opening speed, the Speedmaster certainly lives up to its name: the full height of the opening is available instantly, which prevents collision damage. The innovative Speedmaster sliding door not only offers high speed and unique hygiene properties, but also provides good thermal insulation (40 mm PU foam-filled). Numerous variants are available, e.g. stainless steel, or galvanised steel sheet (painted in RAL colours). A variety of options are available. For example, the drive control can be operated by push-button, pull cord, radar or wireless remote control, depending on individual demands. The cool it Speedmaster is TÜV tested and can be operated without any systems for personnel safety such as safety edges or light grids.

### cool it – superb service in all fields

Like all cool it products the Speedmaster is backed up by individual advice, targeted support at all stages and uncomplicated handling. The focus stays on developing individual solutions and on cooperating with experienced planners. Use of the company's own service teams ensures trouble-free operations, whether during on-site assembly or in the course of maintenance and repair work.

### cool it is always there for you!
